

## Exercise 14 – Writing and using Javadoc

### Objective

The objective is to look at how to write Javadoc and generate some for our own classes. You will need the classes created for exercise 4.

### Overview

1. Open your classes from exercise 4 and write some Javadoc comments for the class and the methods. Try and describe the functionality for each of the methods.
2. Generate the Javadoc from these comments in Eclipse and have a look at it, do the comments reflect what you wanted to explain?
3. Have a look at the Java 8 API, read through some of the Java docs for objects such as String or the primitives and see if you can find useful methods for the future!
  - a. We will be looking at collections in the next module and the Javadocs for classes such as the ArrayList will be very useful!
